

THE EMPRESS EXPRESS

VOLUME XIII. No. 24

EMPRESS, ALTA. THURSDAY, Nov. 12, 1923

Price: \$2.00 Per Year

CORN SHOW

The Lethbridge corn show, which is the first corn show on a large scale to be held in Alberta, takes place November 11 and 12, with a considerable bunch of entries. The average in corn, in the province this year, is estimated at 73,700 acres, chiefly in Southern Alberta. This is compared with 67,000 acres last year and 53,000 acres the year previous.

THANKSGIVING

By John Power

For fertile soil and kindly skies,
For fenced seed, for strength and skill
To sow and harvest the supplies
Which now our bustling gardeners fill,
We give thee thanks, O Lord,
For daily grace through daily prayer,
For daily aid in daily strife,
That we have been allowed to share
The Wine of Heaven, the Bread of Life,
We give thee thanks, O Lord,
For every wise and holy thought,
For all of worth that we have won
For every kindness we have wrought
For every kindness we have done,
We give thee thanks, O Lord,
For faith—all thy gifts the best,
The Vanquisher of worldly cares,
For peace amid the world's unrest.

WHEN IN EMPRESS DINE AT THE

DOMINION CAFE

ICE CREAM
Candies, Cigars, Cigarettes
Always a Full Stock Carried
We cater to farmers.
GOOD ROOMS
A Place of City Style.

Masquerade Dance

The Masquerade Dance on Friday last proved to be an enjoyable event and attracted a good many out-of-town visitors. There were a number of very fine ladies and gentlemen costumes worn, but very few comic and practically no home-made costumes. Short notice may have been responsible for this. La Rue's five-piece orchestra from Shackleton furnished pleasing music, which kept the dance going merrily until nearly day-break.

Prize winners were:
Lady's fancy dress—Mrs. J. Kennedy, early Victorian costume.

Gentlemen's fancy dress—A. Morrow, courtier.

Lady's comic costume—Harold Boyd, "Susan."

Gentlemen's comic—S. Hamilton, coster.

Novelty dance, "lucky spot"—Miss M. Hughes and A. Pears.

Ballet dance—Mrs. I. Wallace and Willard Storey.

Exclusive But Not Expensive

Personal Greeting Cards—Original and exclusive designs. Ask to see our samples. Order now of the "Empress Express." There are but seven more weeks to Christmas. Delay is fatal.

Owing to extreme ill-health, the Deputy Minister of Municipal Affairs of the provincial government, J. H. Lamb has retired, and his place has been taken by W. D. Spence, who for some years has been Tax Commissioner.

For hope amid the world's despair,
We give thee thanks, O Lord,
Ours is the pilgrim's changeful lot;
Let light or gloom fall on our way
May we press on and falter not,
Till in the land of faultless day
We give thee thanks, O Lord.

100 p.c. Increase

Saskatchewan Creamery Co. Win Gold Medal For Unsalted Butter

This week sees the local Creamery having reached the 100 p.c. increase mark of quantity of butter manufactured over last year. Although the quality has improved somewhat, yet in the past three months, "sage brush" has given a great deal of trouble, making the manufacture of prize butter impossible.

The Saskatchewan Creamery Co., were successful in winning the gold medal for unsalted butter (and silver medal for salted butter at London, at the premier dairy show of the world.

United Church

Sunday School, 2 p.m.
On the tomb of C. G. ("Chloe") Gordon, remembered as a Christian General and for his leadership in the Seaford, are these words:

He gave his sympathy to the suffering,
He gave his strength to the weak,
He gave his substance to the poor,
Because
He had given his best to God.

Our Sunday School encourages the living of devoted serviceable Christian lives.
Public worship, 7.30.

Christianity seeks entrance into individual lives, into home circles, into community activities, and into national and legislative affairs—in addition to these avenues for expression of divine life, Christianity through organized local churches provides means for the public worship and reverent honoring of God. The effectiveness of worship is largely determined by the attitude of approach. Let us come to God's house, unhurried and unperturbed in mind, and yet expectant and confident. Eager to honor God and be honored by him. Sermon by

Board of Trade Lunch

Under the auspices of the local Board of Trade, members of that organization met, down at an excellent meal, at the Dominion Cafe on Tuesday evening. After the luncheon, discussion was entered into concerning the combination show and dance to be held at the theatre, next Tuesday. A successful evening is looked forward to on this date.

In the course of the evening other matters were discussed, and Dr. MacCharles gave a brief talk on local health matters. Mr. B. L. Kony, president. Some thirty members were present. It was unanimously resolved that luncheon be held under the auspices of the Board, the first Tuesday of every month.

The Minister.

Special music for Sunday.

Préface—Contralto solo "The Lord is Mindful of His Own." Anthem by Choir, "Amen With Me."

OTHER SERVICES

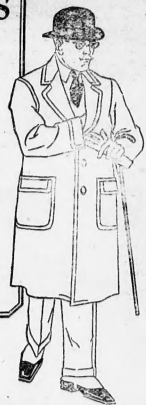

Beautyland, 3.30 p.m.
Roads and weather permit. Sing, worship will also be conducted at Mayfield 11 a.m. sharp.

Social Plains, 2 p.m.
N. W. Whitmore, Minister.

Leishman Clothes

The Magic in a Name

The name Leishman in clothing stands for the finest—the sterling mark on silver.
Big business and professional men throughout the length and breadth of Canada, look for the Leishman label in every suit they wear.
This honour was not easily won. Only through consistently making the finest of garments of the finest fabric, with the finest tailoring, the finest long wear, has this been possible.
The Leishman name now stands for the finest clothes in Canada. Make sure the label is in the next suit you buy.

Great Stores of Energy in BOVRIL

It is not the quantity of food you eat but the nourishment your system absorbs which leads to physical health and strength. Bovril is the concentrated power and goodness of life itself. It causes the digestive organs to extract much more nourishment from their food. This has been scientifically proven by eminent scientists at the request of a Government department. That is why—

BOVRIL puts BEEF into you

The U. S. As a Magnet

During the general election campaign the subject of emigration and immigration as between Canada and the United States received a great deal of attention. It was discussed pro and con, and masses of figures were thrown at the electorate to support this argument or to prove that contention. Whether the general run of people care or why is open to question. It did not, however, require all those verbal fireworks to convince people of one thing, and that is, that the United States does constitute a powerful magnet drawing tens of thousands of people annually from Canada. Politicians may disagree as to the underlying reason for that magnetic power, but that it exists it would be useless, in the face of patent facts, to deny.

Without assuming to question that United States fiscal policies may have a bearing, past and present, in promoting the conditions across the line which now seem attractive to many people, it is natural that the United States should today exercise a great drawing power. From the standpoint of climate, certain sections of the United States attract many people from this more northerly land, just as they draw thousands from other portions of the big republic.

But the real attraction is found in the "hitherto" of the United States, and especially of its cities. People, as a rule, like big things. They are naturally regarded as meaning excellence and success, although often mistakenly so. Consequently the big cities and big institutions of the United States, doing things in a big way, attract.

It is the same influence at work which draws people from all over the United Kingdom to London; causes Frenchmen to flock into Paris; leads the youth of Ontario to go to Toronto, and of Manitoba to Winnipeg. Just so do Canadians naturally turn restlessly to New York, Chicago, Los Angeles and other large centres. It is natural; it is inevitable. As Canada grows, the power of this great magnet will be lessened, but regardless of national policy on either side of the line it will never wholly disappear.

From the purely Canadian standpoint, the most desirable feature is that it is among the very best of our people that this magnet has greatest power. So manifold are the opportunities, and so numerous the openings for the more skilled of our engineers, electricians and mechanics, for our most learned professors, our cleverest doctors, our ablest writers, authors and artists, in a word, the cream of our population fitted for leadership, that it involves an enormous personal sacrifice to reject the offers made to them. I rarely hear, and the only fault to Canada is the great lure they exert in the U.S. and thought of our great neighbor, resulting in the fine understanding and good relations which exist between the two countries.

But with this "bigness" comes a good thing for the United States in the long run? And in the final analysis will the policies which have assisted to develop "bigness" prove a strength or a weakness to the nation?

This alone will provide answers to these questions, but already signs are not lacking giving confidence to the most timid students of public affairs. The big cities of the United States are not only attracting Canadians, but they are drawing the American people away from their farms, their hamlets, villages and small towns.

For example, the farm census of 1925 conducted by the United States Department of Commerce disclosed 75,525 fewer farms than existed in 1920. And as farms decrease in number so does the number and population of hamlets, villages and towns dependent on rural life and progress for their existence.

During these same five years the population of the United States increased through natural causes alone by seven and one-half million. That is to say with 7,500,000 more mouths to feed, there were 75,000 fewer farms engaged in raising food products. The people are concentrating in the large cities and towns, becoming consumers of food, but not producers of it.

England became a highly industrialized nation and the greatest food importing country in the world. Today it is still importing its food supply, but a nation and a half people are out of employment, living on dole provided by the Government. In the United States, President Coolidge said that not many months ago that the United States had reached the point where from better the world's greatest exporters, and now it is directly becoming the world's greatest importer of food.

Any policy which has the effect of drawing the people away from the congested centres of population is not a sound national policy. Such industries only exist to provide the means of the people with articles they must have, and one such industry can supply thousands. And when the majority of the people are drawn to the cities, the country is left with a surplus of goods, which are being turned out there are people to purchase them, then the stimulus which exists in England today is found in Canada.

The United States industrial magnet may attract Canadians at present, but the day is coming when the magnet of the great producing areas of Canada will prove still more powerful. People can get along without such luxuries as the articles of manufacture, but they must have food, and the nation which is in a position to provide food for its own people, but large surpluses for export, is the truly strong, prosperous and contented one.

Want Trained Men
Thinks Science Most Fruitful Field For
Canadian Genius
Delivering his annual address at the annual prize giving of Upper Canada College, at Toronto, Principal Grant said:

"I make no apology for putting the leadership in the forefront. Never had Canada more need than today for disciplined intellect in every branch of our national life; and the boy who has won a university scholarship has at least the beginnings of intellectual discipline and even of intellectual distinction.

"I again appeal for some kind donor, either to give us outright or at least to start a fund for a new research laboratory. My own view is that along the path of scientific research, already so well trodden by such men as Professor MacLennan and Dr. Bunting, rather than along that of literature, lies the most fruitful field for the Canadian genius.

Revenue From U. S. Tourists

More Than Two Million Automobiles
Crossed into Canada last year.
Tourists from the United States have brought \$150,000,000 in revenue to Canada this year, according to estimates of Canadian officials. More than 2,000,000 American automobiles, it is estimated have crossed into Canada already this year. They carried approximately 9,000,000 tourists, or one tourist for every man, woman and child in the Dominion. They provided shares in the Canadian business. Ontario received the larger traffic. Last year 1,576,938 cars from the United States entered Ontario, 165,375 of which stayed from one to thirty days, 1,415 from one to six months and the remainder shorter periods.

GUARD THE BABY AGAINST COLDS

By Keeping Baby's Own Tablets in the House at All Times

To guard the baby against colds and hoarseness, keep Baby's Own Tablets. The Tablets are a mild laxative which will keep the little one's stomach and bowels working regularly. It is a recognized fact that where the stomach is in bad condition, the child is liable to catch colds. Baby's Own Tablets will not exist; that the health of the little one will be good and that he will thrive and be happy. Thousands of mothers have become converts to the use of Baby's Own Tablets. There is nothing to be gained in banishing children and ill-effects; breaking up colds and simple fever; expelling worms and making the little one happy. Among the thousands who praise Baby's Own Tablets is Mrs. Alex. J. Perry, Atlantic, N.S., who says: "I always keep Baby's Own Tablets in my house as I know of no other medicine for little ones to equal them."

Baby's Own Tablets are sold by medicine dealers or by mail at 25 cents a box from Cus. Dr. Williams Medical Co., Brockville, Ont.

Importance Of Nickel Industry
The growing importance of the nickel industry to Canada is emphasized by an analysis of recent export figures. During the fiscal year, ending March, 1925, the total nickel and its products exported from Canada amounted to more than \$10,000,000, as against \$9,000,000 for 1924, and \$8,000,000 for 1923.

An Oil of Merit—Dr. Thomas' Eczema Oil is not a jumble of medicinal substances thrown together and pushed off as advertising, but the result of the careful investigation of the healing qualities of certain oils as applied to the human body. It is a rare combination and it won't keep people away from the first. A trial of it will carry conviction to any who doubt its power to repel and heal.

Saskatchewan Wheat Pool
What pool officials state that approximately 70 per cent. of the wheat acreage, in addition to a substantial percentage of the total acreage, is under contract to the Saskatchewan pool. The pool has passed its objective of nine million acres with 77,000 contracts.

BOTHERED WITH ECZEMA IN RASH

Face Was Disfigured.
Healed by Cuticura.

"Some time ago I was bothered with eczema which broke out on my face in a rash. I took no notice until it was so bad that I had to spread and the irritation caused me to scratch. My face was disfigured and the trouble lasted for three months.

"I tried different remedies but none seemed to do any good. I read about Cuticura. After using three cakes of Cuticura Soap and one box of Cuticura Ointment I was completely healed. (Signed) Miss Gladys Dahl, 3141 St. N. Milwaukee, Wis., Sept. 29, 1924.

Bolshevism in Britain

Says Reds Who Are British Subjects Cause Greatest Anxiety

One hundred and thirty-three aliens have been deported from England since Jan. 1, and 1,572 refused admission to British ports, according to Sir William Joseph-Hicks, home secretary.

Answering a criticism that the home office is too lenient with foreign agitators, he said that the greatest difficulty arises from the reds who are British subjects and therefore are not subject to deportation.

"If you look up the names of the Communists arrested you will find that not one of them is alien. It is the British citizens and not alien agitators who give the greatest anxiety about," he asserted.

Awarded Wembley Medal

Canadian National Railways Exhibit

Receives Sign Recognition

Award of the certificate of appreciation and the commemorative medal for 1924 to the Canadian National Railways exhibit at Wembley, was announced in a letter received by the C.N.R. offices at Winnipeg. The awards for 1925 will not be made for some months yet. Visitors who saw the exhibit in the pavilion of the Canadian National Railways at Wembley in 1924 were unanimous in describing it as one of the outstanding features of the display.

Their Majesties King George and Queen Mary, H.R.H. the Prince of Wales, the King and Queen of Spain, and the Prince of Siam were among those to express their opinion of the size and variety of the C.N.R. exhibit.

How the West Expands

Increase in Grain Crop in Past Twenty-five Years Is Phenomenal

Some comparisons of crop movements on the Canadian Pacific line for twenty-five years are now in vogue. In 1900 the total wheat crop in the three prairie provinces amounted to 17,035,546 bushels, which, at that time, taxed the facilities of the railways for several months to move this amount of grain. In 1925, from September 1 up to and including September 26, a period of twenty-seven working days, there were marketed on Canadian Pacific lines alone a total of 55,525,651 bushels of wheat, or 10,252,505 bushels of other grains, or a total of 55,525,651 bushels.

Father Of Bolshevism

Lenin to Have One of Most Elaborate Tombs in World

Nikol Lenin, father of Bolshevism, is to be given one of the most elaborate tombs in the world, plans for the erection of a marble mausoleum to replace the site of the tent erected in 1917 in which his body now rests having been announced by the Soviet Government.

The plans provide for a great central hall, where the casket will be placed, with a number of auxiliary halls of various character. The top of the tomb will take the form of a tribune from which revolutionary speakers will address the crowds. In front of the tomb will be a large square.

Says "Hunger Centre" Is in Brain

A scientist claims to have discovered a "hunger centre" in the brain, which controls the appetite, and which proves that hunger is not in the stomach but in the head. He states that an injury to this "centre" may create an abnormal appetite, or it may kill any desire for food.

Foley: "What makes you so sure that you cannot afford to own a car?"

Bowling: "I have none."

Gold Hunters Have

Returned From Cassiar

Many State Intention of Going Back Next Spring

The last batch of the season to come down the Silbicon River from the Cassiar gold region in Northern British Columbia arrived at Wrangell, Alaska, Oct. 18, with a capacity list including miners, engineers and prospectors. Many of the passengers en route to Vancouver and Seattle for the winter.

Courage gold and nuggets taken from new gold fields valued at \$7,000 were exhibited by several placer miners.

William Grady, discoverer of the new gold district, brought out 425 ounces of the precious metal after spending 53 days on his claim. He said he did not do much mining on his property, devoting most of his time preparing the claim for next year.

Many of the returning gold hunters said they would go back to the claims early next spring, and would travel overland into the Cassiar district before navigation on the Stikine opens.

Filberts in B.C.

Coast Province Can Grow Wide Variety of Edible Nuts

Filberts in commercial quantities, are now being produced in British Columbia. There has been considerable interest shown by a number of people in this province in the growing of nuts and it is known that English walnuts, chestnuts, as well as number of other edible varieties, can be successfully produced. It is anticipated that in a short time all kinds of commercial nuts of the more hardy type, will be grown in British Columbia for commercial purposes.

Pathfinder Of The North

Will Be The First White Man To Visit Remote Arctic Island

During the coming winter, Sergeant Joy, of the Royal Canadian Mounted Police, whose exploits in the north have formed the basis of several stirring narratives, will make a personal patrol from the Craig Harbor detachment across Ellesmere Island and end at Axel Heberg. By this means Canada's claim to the island will be strengthened. Sergeant Joy will be the first white man, so far as is known, to reach Axel Heberg Island.

Puts Flavour into Home Cooking

Don't think of Mustard merely as a spicy relish to enjoy with cold meat.

Mustard is a seasoning to be used as widely as you use salt and pepper.

Mustard brings out the natural hidden flavour of cooked dishes and, adding its own flavour, gives them a new zest and relish.

Most Northerly Radio Station Now Reaches Arctic Circle In Daily Touch With Civilization

The Arctic circle is now in daily touch with civilization, through the formal opening to the public of the new station of the Interior and department of national defence, of the most northerly commercial radio station in Canada. This station is located at Akivik, at the mouth of the Mackenzie River, and lies 1,200 miles north of Edmonton and 125 miles beyond the Arctic circle.

The new station, in conjunction with others in the north, will supply a communication service for the Northwest Arctic and the Mackenzie basin, and will undoubtedly, it is stated, prove of great value to the many trading and transportation companies operating in that district. The country, it is pointed out, is very rich in furs, the yearly export running into many hundreds of thousands of dollars. There are also evidences of rich mineral deposits, but this resource has yet to be developed. The oil wells at Fort Norman, 200 miles south of Akivik, are already being developed, it is officially stated, and fuel oil and gasoline can now be obtained locally practically within the Arctic circle.

The opening of the Akivik station and the previous opening of the Fort Smith station on Sept. 5, marks the completion of the development work on the western portion of the project in which the Northwest Territories branch is interested. It will be recalled that the equipment of Akivik station was lost when the Lady Klondike, of the Hudson's Bay Company fleet, sank off Point Barrow in August, 1924. The completion of the Northwest Territories branch is a year until new equipment and stores could be shipped in down the Mackenzie River this summer.

Going Back To Grain

Predicts U. S. Cattle Lands Will Be Parted In Wheat

Two million acres of land in the southwest, heretofore used for cattle ranges, will be planted in wheat within the next eight years, says a Canadian agent, J. C. Kane, predicted in an address at the 25th annual meeting of the Grain Dealers' National Association at Kansas City.

He said properly was ahead for the large farmer of Northern Texas, South Dakota, Oklahoma, Colorado and Kansas. If the change to grain from cattle is made, much of the acreage which he predicts will be planted in wheat has been underfed, J. C. Kane declared.

"This is the first time the United States has been on a demand basis," he said, "and it is the first year that the wheat tariff has benefited the farmer."

No Crop Failures

Stated That There Was Not One Crop Failure In Manitoba

Not one crop failure in the province of Manitoba is the report of the provincial department of agriculture recently released. Conditions from threshing machines are satisfactory and a generally optimistic tone prevails. Ninety per cent. of the crop is threshed in the Red River Valley, and as far west as Portage la Prairie, and other farm work well in hand. Averages per acre from 61 reports received show yield 19.2 bushels; oats, 41 bushels; barley, 23 bushels; flax, 12 bushels; and clover, 19 bushels. These are higher in every case than final averages for the 10 past years.

Producers promise a good crop. Ploughing is better than in years. Ploughing is nearly started. Stock is in good condition. The dairy industry is showing increase of better output over last year.

Clock 700 Years Old

On the Walls Cathedral in London Is a clock, constructed by a monk from primitive material and with primitive tools, some 700 years old, but which still is in faultless condition. Being given the hour, the clock records the quarters of the moon and on the stroke of the hour a group of medieval figures break into life and whirl round the dial like chimes day after day.

Earth Has Growing Pains

A tremendous earth quake is going on, explains Prof. Charles W. Brown, geologist of Brown University, Providence. The series of earthquakes on the Atlantic and Pacific seaboard this year are more evidence of growing pains, he says in a magazine article. Monthly. When the earth finally gets adjusted and settled in old age, there will be no more quakes.

W. N. H. 1929

Electric Ship Transports Grain

Carries 70,000 Bushels of Barley From Duluth to Montreal

Montreal placed another notch on its history book when the Twin Cities, the first electrically driven ship to use the port of Montreal, left after unloading 70,000 bushels of barley.

The Twin Cities, owned by the Minnesota-Atlantic Transit Company, came from Duluth. Her gross tonnage is 1,400 tons and she is capable of carrying 2,100 tons on a fourteen-foot draught.

The boat, which gave the appearance of a dismantled ship, is entirely electrically driven. Her engines are the Diesel electric type, and one of the features of the ship, that is she is propelled by twin rudders and twin screws, both of which are controlled from the wheelhouse.

When going through the canal the masts, davits and wheelhouse were brought down to gunwale level to permit the boat to pass under the stationery bridges in the canal.

Capt. Martin Peterson was in charge of the boat and crew of sixteen, and he stated this was the first trip made to Montreal.

Her speed is ten knots an hour and she also requires, he said, on the trip from New York to Wallaceburg, Ont., to Detroit and back to New York is thirty days.

All of her appointments are of the electric type. Her galley, for instance, is electrically operated, and she has accommodation for 600 tons of package freight electrically refrigerated.

She expects to maintain a regular service to this port with the sister ship, the Twin Port, both of which are the invention of Henry Ponton, of Cleveland, Ohio. Both boats cost in the neighborhood of \$500,000.

Indian Lookout Used By Forestry Service

California Rangers Keep Watch In Pine Trees 200 Feet High

An Indian lookout in the form of a Canadian lookout pine tree in the vicinity of Lake Arrowhead, Cal., is one of the valuable aids to the United States forestry service. The ancient tree, nearly 200 feet high, serves the ranger lookout eyes as served Indian warriors, scores of years ago in tribal wars.

At the base of the pine sign blazed in the past by the Indians may be seen today. Today keen-eyed rangers keep continual watch in the upper branches for forest fires. They are equipped with powerful glasses and telephones, in modern contrast to the sharp eyes of the aboriginal lookout and his crude wigwag system.

Canada a Beautiful Country

New Resident of Alberta is Pleased With Its Attractiveness

Visitors and new settlers in Canada are impressed, not only with the opportunities which the country offers, but with its beauty and attractiveness. One such new resident now living in Canada, writes a Canadian agent as follows:

"As you are familiar with this section of the year in Western Canada, I do not need to tell you how beautiful it is, but I am sure many do not know this. This year is very favorable to farming, and the threshing gives a great pleasure and satisfaction to all. I am greatly enjoying it."

Average temperature of the Canal Zone is 79 degrees.

Captain R. G. Latta

Captain R. G. Latta

Who has been appointed to the command of the Empress of Scotland, flagship of the Canadian Pacific fleet in succession to Captain James Gillies, who was recently appointed manager Canadian Pacific steamships in London. Captain Latta has been with the company since 1905 and for the last two years has been on the bridge of the Montreal.

Wheat Belt To Move North

Discovery of "Garage" Wheat Will Extend Crop Area

It is reported that the new wheat called the "Garage" may push the wheat belt 100 miles farther north. The new wheat is said to be rust resistant and if the claims advanced for it by J. H. Newman, cereal specialist of the Canadian Government, prove true, it will be a rival of the famous Marquis wheat, now the popular wheat in Canada and among the majority of American wheat growers.

It continues to justify its early promise of this new wheat are that it is a much heavier yield than the Marquis, under any condition of growing, and it is said to be ripe a week or two days earlier than the Marquis, which enables it to escape the possibilities of rust and early frosts.

The wheat has been distributed throughout Canada for further tests. It continues to justify its early promise that this problem will be reduced to a minimum. This past season losses of millions of dollars and wheat growers are anxiously awaiting the results of this wheat with the new grain—Montreal Witness.

Manitoba Sugar Beets

Proving Grounds For Experimental Planting In Eastern and Southern Parts

The analysis of sugar beets grown on experimental plots in Manitoba has commenced and will continue for the next month, according to the secretary of the Manitoba Sugar Company. These beets, grown on a purely experimental basis, are being analyzed on a total of 250 plots throughout the eastern and southern portions of the province, chiefly in the Red River and Assiniboia valleys.

The wet weather was a handicap to the beet crop as it delayed maturity and the cutworms were bad in places. In spite of these factors 10 per cent of the crop is quite satisfactory. A few cars will be shipped to Chaska, Minn., for the purpose of testing the quality there. Arrangements are already being made to increase the acreage considerably for next year, when it is hoped to ship the crop to the factory now under construction at Grand Forks.

Increased Gold Production

Ontario Holds First Place By a Wide Margin

Gold production in Canada in the first half year in 1925 reached a new record of \$2,404,000 ounces, worth \$17,894,000, as compared with 2,002,264 ounces worth \$14,575,711 in the same period last year. Ontario continued to hold a big lead with 70,134 ounces as compared with 51,458 ounces in the first half of 1924.

From the Porcupine field the production amounted to 271,566 ounces of nearly 82 per cent. of the total for Ontario, while Kirkland Lake produced 156,477 ounces, or 22 per cent. of the total. Other important fields are the Porcupine, which produced 122,444 ounces, worth \$832,424. Small amounts were recorded for Yukon, Manitoba, Quebec and Nova Scotia, in the order named.

Canada's copper production in the first half of 1925 amounted to 2,665,000 pounds, valued at \$254,028, which was an increase of 95,127 in value over the same period in 1924.

A bird, the size of a sparrow, has been found in South Africa which can run faster than a horse.

Utilization Of Straw For The Manufacture Of Paper May Mean Much To Western Farmer

Fitting Unemployed For Overseas Work

Fuller Outline of Scheme Promoted by British Government

Further particulars are now available of the scheme promoted by the British Government for providing training for young unemployed men which will be calculated to fit them for farm work. One of the four residential training centres will be at Claydon, near Ipswich, and those accepted will be trained either for farm work in England or overseas. A list will be made with about 1,200 men, of whom 200 will be for overseas.

Applicants for training with a view to employment overseas must be: (a) provisionally approved by a representative of the Dominion government, must, before entering training, sign an undertaking to remain throughout the course, and as such as possible thereafter, to proceed to the Dominion concerned, if finally approved for employment there. (b) Single men between the ages of 19 and 25. (c) The case of men who served with the forces during the Great War in the upper age limit may be relaxed to the extent of such service, up to the age of 28. (d) Good character and sound physique. (e) Men who have had no opportunity of learning a skilled trade. (f) Must not have received a course of instruction in public speaking or financial assistance from the civil liberties or King's funds.

The precise nature of the course of training for overseas employment may be varied from time to time, but it is intended, generally, to give training in: (a) The handling of heavy machinery, including ploughing and care of livestock, elementary repairs to harness. (b) Milking. (c) Simple agricultural work. (d) Elementary work of the work, such as ploughing, sowing, weeding, mowing, and care of livestock, and necessary, (f) Timber falling and (g) Simple repairs to farm implements.

An Opportunity For Canada

Farmers Could Work Up Big Chilled Meat Export Trade

More and more it is becoming apparent that Canadian farmers should look forward to the formation of a big chilled meat export trade and this is the most special assistance the Dominion Government. The latest expert to speak on the subject is Secretary-Treasurer McLean, of the Harris Alton Company. He maintains that Canada has the natural endowment necessary to become the world's largest source of beef and pork. That her cattle can be finished on grain, an advantage which her competitors, Australia and Argentina, lack. The present position is that the chilled meat could be delivered in Great Britain in two weeks and that practically be the same as the British market. The need, more and more, everyone knows the meat is improving—"King's—Kingston Standard."

Record Grain Loadings

All Records Are Broken At Lake Ports

The record for the unloading of grain cars at the port of Fort William-Port Arthur, was twice broken in the week ended October 3, first on the 29th September, when the highest record hitherto made, which on November 6, 1922, was eclipsed by 41 cars, and on October 2nd was beaten by 43 cars. The number of cars unloaded on the latter day was 2,484—3,492,247 bushels being loaded.

Establishing what is easily a world record for movement of wheat, grain poured into Port William and Port Arthur elevators at the rate of nearly thirty bushels a second for the whole of the twenty-four hours of October 5th from Canadian Prairie Railway cars. In all 1,794 cars were unloaded during the day and each car carries an average load of 1,500 bushels, representing a total of 2,550,000 bushels.

Aeroplane For Women

A dainty little aeroplane designed especially to appeal to female tastes has appeared in the London market. It is being sold for \$300 (about \$200). It is a one-seater and is built, the manufacturers say, "for the women only."

The Royal Aero Club of Great Britain has granted flying certificates to seven women.

Most of our common sayings are very old, and doubtless "You can't keep a good man down" was coined by the white.

The Future of the Paper Industry

And, indeed, the future of the whole trade is bound up with the perennial anxiety to these closely associated with either owing to the diminishing supply of paper material from wood. For the United States has become the greatest consumer of paper in the world, and as its own soft wood supplies have nearly exhausted it has come to depend largely upon Canada and to draw more and more upon Canadian forests.

Not long ago the London Morning Post published an issue on paper made from straw, and the unequalled success seems to have definitely lifted the question from theory to practice. The trouble experienced in the past, as stated, has been with the brittleness of the paper, but six years' experiments have overcome "this difficulty." This De Valpe process, as it is known, has been perfected in Great Britain, and it is expected that the same paper, the work is to be continued on a large scale in Canada.

For some considerable time expert tests have been in progress in Canada looking to the utilization of western straw stalks in the manufacture of paper. Under the sponsorship of the Canadian Pacific Railway a method for the utilization of straw in the manufacture of pulp for conversion into paper, under the supervision of Mr. W. H. Allen, of the Dominion government, has been developed. With such success that efforts are being made by the provincial authorities to interest capitalists in the commercial manufacture of this product in Alberta.

It would seem inevitable that sooner or later straw will become a raw material in the manufacture of paper. This will mean a gigantic industry for the west, and the Dominion government is doing its utmost to prevent any danger of a loss of supremacy in the newpaper industry through dwindling forest supplies. Such an industry will be in addition, mean the utilization of an enormous by-product of farming which is now wasted, for it is estimated that 7,000,000 tons of straw are burned annually in the Dominion, and "this is increasing yearly." In Eastern Canada there is a use for straw in connection with the livestock industry, but in the west the burning of straw piles after threshing is a sad spectacle and an unsightly industry. The advent of straw paper making will bring additional revenue, more employment, preserve a great industry for the west and result in an export of straw for Canada of prime importance.

Shipping More Butter

British Imports Taking Large Quantities of Canadian Product

Butter exports via Montreal are showing a marked increase. The quantity of butter as they were in 1924, and the movement of cheese is also larger, although not in the same proportion. During the month of May in the middle of September, exports through the port of Montreal amounted to 25,157 packages of butter and 7,750 packages of cheese, compared with 25,157 packages of butter and 6,445 boxes of cheese were shipped, Manchester, Liverpool and London, taking large quantities of both, and Bristol a heavy consignment of cheese.

Competition At Regina

Girls and Boys to Show Aberdeen Angus Calves at Winter Fair

Girls or boys in Saskatchewan who wish to test Aberdeen-Angus calves to show at the winter fair in 1926 should apply to the Secretary of the Saskatchewan Aberdeen-Angus Club.

Breeders of Aberdeen-Angus cattle having calves born in 1925 (pure-bred or grade) suitable for girls and boys to show in the Winter Fairs of 1926, are requested to communicate the fact to James Brown, Secretary, Saskatchewan Aberdeen-Angus Club, Neudorf, Sask.

Spartan Race Impossible

"Have you had your ultra violet rays this morning?" If you have, your eyes are probably a little red and "afraid," according to Dr. C. M. Westerman, in an address to the Physiotherapeutic Association at Chicago. The doctor said that if every body could get his full share of the ultra violet, a Spartan race would be created. But such a race would not be a real race, he said.

Wife: "How do you like my cake?" I got the recipe over the radio; it's a western idea."

Husband (trying to bite into the cake): "I want to know how you got that broadcast through the Rocky Mountains there."

Canada's Natural Resources Harvest

Canada a Good Country to Live In All the Year Around

The natural resources intelligence service of the department of the interior at Ottawa, says:

It is interesting to examine the literature that is being circulated by southern countries, and notice what they have to offer to prospective visitors to their districts, and then to give thought to what Canada has in reserve for her people. From the south we are told that there is sea bathing, golf, tennis and other summer sports—just what Canada has been indulging in for the past six months. They have no change to offer to the active and energetic red-blooded Canadian. The south may appeal to the invalid, or to the person who has passed the prime of life and requires a warmer climate, but Canada has her own appeal. Who would care for the pleasures of strolling, of hockey, of skating, tobogganing, snowshoeing, or of the long tramp on a winter holiday? The snow sparkling in the sunlight, with the languor or lassitude induced by the warm climate of the south? Even in her selection of immigrants Canada favors a whole of the more northerly countries of Europe owing to their greater energy and activity.

Canada's winters are one of her assets, and this is becoming more generally recognized. Her people are accustomed to rebuild a body weary depleted by the heat of summer, they are able to indulge in an entirely different range of outside sports, thus replenishing their energies, and the passing of winter they can look forward to their summer again. There are many countries in the world where the sun, the Canada, and Canada is a good country to live in all the year around.

A Storehouse Of Oxygen

Why Fish Can Remain Motionless in Water Without Sinking

A fish is much heavier than the water and yet it can remain quiet in the water for a long time without sinking, and can raise its head and swim up. Why is this? Because inside its body is a sac filled with air. It is a storehouse of oxygen. The air is lighter than the water, so that air-filled bag helps to keep the fish afloat. Not all fishes have air-sacs, because all do not need them. Some fishes, such as the sea bream or the sand at the bottom of the sea, like flatfishes and some eels, do not have air-sacs. But the catfish, surgeon and codfish have an air-bladder. In some fishes the air-bladder opens into the food-tube. In others it does not. In this, too, gets its oxygen from the blood vessels, which pass into its walls. The fish takes its oxygen through its gills. Water is taken in through the mouth and forced out over the gills, which you can see very red because they are filled with blood. The blood takes up the oxygen from the water and carries it to all parts of the body. The blood also carries waste matter from the body to the gills and there forces it out into the water.

Gas Masks For Army Animals

Protector Against This Means of Warfare Has Been Devised

Although the use of poison gas in warfare may be outlawed, the United States army will be prepared to protect its carrier pigeons, horses, mules and other animals from the fumes should occasion arise, for special masks have been devised to shield beasts and birds in the service. The protector for horses and mules consists of a cheese-cloth bag which covers the nostrils and upper jaw only, for they breathe only through the nose so that it is not necessary to cover the mouth. Their eyes need no protection against the gas for they have no tear ducts. The gas mask is similar, but covers both upper and lower jaws. The pigeons will wear no protector while in flight, but will be guarded from gas by a special shield entirely covering their headgear—Popular Mechanics.

Weapons Criminals Use

Criminals of different nationalities use different weapons for their work. The English seem to prefer small knife-daggers. In Porto the Apache use a knife or revolver. desperadoes of Italy prefer the stiletto, Spanish the stiletto and knife, and Americans the revolver.

Fur Farming In B. C.

In the new companies incorporated in British Columbia recently there are less than three fur farms. There are several fox and mink farms now operating and several under process of organization.

Children in the Irish primary schools are required to study the Irish language.

Curious Building To Be Demolished

Walls of House in England Decorated With Human Bones

The postmaster-general, having sanctioned the erection of a new post office at Shipstone-on-Thames, Middlesex, one of the most curious, if not the most curious, of buildings in the country, will pass away by the demolition of the existing premises. The post office is kept by C. C. Newman, who also keeps a general shop and a public house, and is a very quaint appearance, with its low-pitched eaves supported by the old oak beams, and almost every room having a different floor level. But the exterior of the house is the strangest part of it, for the walls facing the street, immediately below the roof, is decorated with scores of human bones. The house is probably 600 years old, and tradition has it that the bones, which are still firmly set in the wall, were placed there when it was built. Whence the bones came is a mystery, but legend has it that they were dug up near the River Thames, close by at the spot where it is supposed Julius Caesar crossed with his hosts. Some 60 years ago, when Mr. Newman's father took over the premises, the lower part of the house was stultified decorated with knuckle bones, and a window was framed with them. These, however, were destroyed during alterations.

Can Never Pay Fine

Would Take English Captain Over Two Thousand Years

It is understood that Captain Cecil Herbert, who has been in British Prison, England, 15 months in connection with the gun-running scandal of last year, will be released on or about October 12.

He was fined \$120,000 for exporting guns without a license—twice the value of the smuggled goods—and not having the means to pay, he was sent to prison.

It was stated that the guns, which were transhipped in Madagascar, were for Russia or a state on the Russian frontier.

To pay the fine by devoting his entire fortune of \$125,000 was impossible, and he would need to live to meet the sum of \$125,000.

King George Reads Bible Daily

King George has let it be known that he reads a chapter of the Bible every day of his life.

At a recent dinner, Rear-Admiral A. R. Smith said in a speech at a "Bible and Empire" demonstration held at Windsor and the auspices of the World Evangelical Alliance.

Admiral Smith's speech was a commendation of Britishism on account of its rejection of the Bible.

BRINGING IN THE MOOSE HEAD

Country adjoining Jack Fish River on the east where Lake Polly carries Helen Lake.

Kingsley, well-known international hunter and fisherman, has some good news for hunters as to the outlook for the coming big game season. He has made a careful survey of Northwestern Ontario and has found an unusual number of deer, moose and caribou are plentiful, he says, with moose mostly in evidence between Nipigon and Jack Fish River.

In early fall their favorite place is a bay on the east where Lake Polly carries Helen Lake.

Kingsley, well-known international hunter and fisherman, has some good news for hunters as to the outlook for the coming big game season. He has made a careful survey of Northwestern Ontario and has found an unusual number of deer, moose and caribou are plentiful, he says, with moose mostly in evidence between Nipigon and Jack Fish River.

Filling Orders For Tree Seeds

Domestic Forestry Branch Supplying Britain, Europe and New Zealand

A large order was received lately by the Dominion forestry branch for tree seeds to be used by the British forestry service.

In addition orders from New Zealand and many parts of Europe are being filled. The seeds will be gathered from localities where conditions are suitable for the growth of the trees, and the plants will be cleaned and prepared at the plants of the forestry branch at Westmount and Rocky Mountain House. The forestry branch office in Calgary is now making arrangements to gather the seed, but it is not expected that all the orders will be filled this year, owing to the scarcity of seed. The last three years have been marked with poor crop years.

Britain wants 7,000 pounds of Douglass fir seed, (cost variety); 2,000 pounds of Sitka spruce (Quebec variety); 500 pounds of Douglas fir (Island variety); 200 pounds of Lodgepole pine (Alberta).

He has made his first order for tree seed in Canada in 1921 and the order now on hand is practically a duplicate, which speaks for the success of the Canadian tree seed in British reforestation work.

There are small orders from a number of European countries, particularly Finland.

Canadians Coming Back

Statistics Show Hundreds Are Returning From United States

The following statement in regard to the return of Canadians from the United States has been issued by the department of immigration.

Seven hundred and thirty-three former Canadians who have lived in the United States more than six months returned to Canada in the first five days of October to make their permanent home here, according to statistics compiled by the department of immigration and colonization.

In the same period, 479 immigrants entered Canada from the United States and the total number of returning Canadians reached a total of 376,525.

New High Yielding Oats

The department of agriculture's experimental station in New York state has developed several new high yielding oat varieties for cultivation in New York, it was announced.

St. Lawrence, N. Y., has been tested on an average yield of 50 bushels to the acre, against an average yield of present used varieties of 21.9 bushels to the acre.

Saving Requires Will Power

People With Small Income Can Always Save Something

One frequently hears the statement, "I cannot save money because my income is too limited."

This is one of the most common excuses offered by persons who are not thrifty.

A man earning \$10,000 a year may say this with apparently honest convictions.

Another man earning \$1,000 a year may say the same thing with the same honesty of feeling. Ask the \$1,000 a year man if he could save any money on \$10,000 a year and he undoubtedly would say, "Yes."

But the chances are he would not. The point the British surgeon makes is that those who are unwilling to make the sacrifices necessary to save on limited incomes are just as unwilling to make sacrifices when their incomes are increased.

Saving money is not a matter of income. It is a matter of will power. Most men who have succeeded have had to do so at great odds.

Saving money on a limited income does require skill. But because of this the savings take on additional value. It is not the amount of money that counts, but the amount of character necessary to provide the savings.

Do not be misled by the excuse that you cannot save money because you do not earn enough. If your income is limited, your savings will necessarily be meager, but they will grow in time and will bring all the greater rewards because of the added sacrifices that they cost—B. W. Strain, President, American Society for Thrift.

New Citizens For Canada

More Settlers Have Arrived For Ontario and Alberta

Canada is still the land of opportunity and a country where industrious men may make good, as evidenced by the arrival on the White Star-Dominion liner Regina of a family of 13 persons coming to this country to join three other members of the same family residing in Toronto.

The new citizens are the family of the Alexander, of Belfast, Ireland. They will settle at Kingsville, Ont.

Arriving by the same boat was a family of 20 young men from England who are travelling to Alberta to take up farming, following an initial course of instruction in Canadian methods.

Supper For Brains

One of the scientists says there is brain food enough in a lump of sugar to produce the plays of Shakespeare, but asparagus playthings, before buying asparagus, should note that he adds it must feed a brain like Shakespeare's—Boston Transcript.

Relics Of Mount Builders

Eight Skeletons of Men of Ancient Race Found Buried on Indiana

Eight skeletons, one of them clad in copper armor, and a hoard of rare weapons and bits of personal adornment have been found in a burial mound on the farm of Groves, near Walkerton, Indiana.

Vealburg, 70-year-old farmer, had long doubted to know the secret of the mound, which, according to local tradition, dates back hundreds of years.

The eight skeletons lay in circular formation, arranged like the spokes of a wheel, with skulls together. Copper breastplates, bands and other bits of armor adorned the skeleton of one man who apparently had been of great stature. Imbedded in this skull was a beautifully chipped flint arrowhead.

The soft earth of the mound revealed other treasures. Three points of flint, believed to be either silver or white gold, lie with the bones. There were also three copper bands, which antiquarians here believe were used to bind war clubs. Two pipe bowls, one of smooth black stone and the other with the replica of a fantastic monster, were found.

The belief that the bones are not those of Indians, but belong to the ancient and little known race of mound builders, has arisen, due to the great size of the bones, and the fact that skull formations are not those of Indian types. The skulls seem to have little forehead, and the eye cavities are high in the head.

Care Of Infants

Says Women Do Not Know How To Feed Babies

"To my mind, one of Canada's greatest needs is the fact that her women do not know how to feed babies."

The experience of Dr. James Wilson, C.M.G., Ottawa, chairman of the Dominion executive of the Canadian Red Cross organization, who was the guest of honor at a dinner given by the Winnipeg branch of the society, is high in the land.

Country adjoining Jack Fish River on the east where Lake Polly carries Helen Lake.

Kingsley, well-known international hunter and fisherman, has some good news for hunters as to the outlook for the coming big game season. He has made a careful survey of Northwestern Ontario and has found an unusual number of deer, moose and caribou are plentiful, he says, with moose mostly in evidence between Nipigon and Jack Fish River.

In early fall their favorite place is a bay on the east where Lake Polly carries Helen Lake.
